

Amendments to the Specification:

Please replace the last full paragraph on page 4 (lines 20-26) with the following amended paragraph:

In one preferred embodiment, the fabric display **100** includes a frame **106** that is pivotably mounted to a wall or other support surface **105** through the use of opposing brackets **104**. More specifically, the frame **106** includes a vertical pivot rod **110** that is secured between the brackets **104** so that the rod **110** is able to pivot about a vertical axis passing through the rod **110** and the opposing brackets **104**. While the frame **106** shown in FIG. 1 is preferably mounted to a wall, the present invention encompasses the use of alternative support means (such as a weighted base) for the rod **110** to provide for a more portable version of the display **100** as described below.
